Description: c function to calculate fare

```
*/
```

```
#include<stdio.h>
```

```
float calculate_fare(float distance);
```

```
void main()
```

```
{
```

```
    float distance, bill;
```

```
printf(" Enter the  distance travelled in Km: ");
```

```
scanf("%f", &distance);
```

```
bill = calculate_fare(distance);
```

```
printf("The fare is: ksh%.2f", bill);
```

```
}
```

```
float calculate_fare(float distance)
```

```
{
```

```
    float fare;
```

```
fare = distance * 50;
```

```
return fare;
```

```
}
```
