```c
#include <stdio.h>

int main() {
    FILE *file;
    float amount, total = 0;

    // Open the file in read mode
    file = fopen("sales.txt", "r");

    // Check if file opened successfully
    if (file == NULL) {
        printf("Error! Could not open file.\n");
        return 1; // End program if file not found
    }

    // Read all amounts from the file and calculate total
    while (fscanf(file, "%f", &amount) == 1) {
        total += amount;
    }

    // Display total sales
    printf("Total sales for the day: %.2f\n", total);
```

```c
    // Close the file

    fclose(file);

    return 0;

}
```
